

NATIVE PLANTS AND POLLINATORS WORKSHOP

LEARN HOW TO PROTECT AND PROVIDE FOR NATIVE POLLINATORS IN TO YOUR YARD

Bees and other pollinators are struggling; they are suffering from loss of habitat, disease, colony collapse disorder, and excessive use of chemicals in residential landscapes.

Pollinators play an important role in our ecosystem — supporting plant life! Managed bee colonies in the U.S. are at high risk. Loss of managed bee colonies may result in the loss of food crops that we enjoy.

Help protect and sustain our native pollinators by planting native flowers in your yard. Native plants provide nectar and breeding areas for these important animals.

Help support a vital part of our ecosystem and enjoy frequent visits from butterflies, hummingbirds and non-aggressive bees.

OUR POLLINATORS NEED YOU!

Register to attend a workshop today!

- **October 4, 2016, 6:30—8:00 pm**
Livonia Civic Center Library, 32777 Five Mile Road, Livonia, MI 48154
- **October 12, 2016, 6:30—8:00 pm**
Maplewood Center, 31735 Maplewood Avenue, Garden City, MI 48135
